

Customizing Client Color and Name

Since GECAMED 2.06.00 there is a hidden feature available to customize the NAME and COLOR of your installation. This might be very Useful to distinguish the Clients if multiple installations are used on the same machine.

- The NAME is shown at the end of the window title in the GECAMED client. Client can be any String.
- The COLOR is used as Background of the Module Button Bar on the left side of the Client. Color has to be a String containing the RGB values from 0-255 (e.g. 255,200,200 for light red)

These values can be set by adding entries into core.info db table:

```
insert into core.info (key, value, date) values ('NAME','DEMO-SERVER',  
'now');  
insert into core.info (key, value, date) values ('COLOR','255,200,200',  
'now');
```
