

User already exists: postgres_gecamed

When you install a second time GECAMed, you may have a problem with a user in postgresql. First remove the PostgreSQL Database from your system via the Add&Remove Programs in the windows control panel.

Afterwards you have to delete the user postgres_gecamed in Windows:

1. Go to the Control Panel ⇒ Administrative Tools ⇒ Computer Management
2. Select Local Users and Groups
3. Select Users
4. Select and delete the user postgres_gecamed

Reboot!

Alternative: Open a command window (CMD) using the “Start ⇒ Run” menu entry. Then type the following command and execute it by hitting <enter>.

(Windows XP Home versions does not have the tool described above)

```
net user postgres_gecamed /delete
```

This might not work on Windows Vista!!! If you are having problems with Vista and removing the user, you either have to know where to remove users in your Vista or, disable User Account Control (UAC) feature. And afterwards, retry the command above.

- [UAC deaktivieren \(german\)](#)
- [HowTo disable UAC \(english\)](#)
