

GECAMed - Gestion de Cabinets Médicaux

It seems that as of today (05.02.2016) the GECAMed Client Webstart is broken on some windows clients.

We are still investigating the problem that seems to appear on different Windows systems with different Java and GECAMed Versions.

It might be a problem with the code signing certificate that is needed for the Webstart - which is still valid until the end of this month.

The new GECAMed Release 2.05.00 which contains a new certificate is scheduled for next week anyway.

As a temporary fix, the only solution FOR NOW is to download the client locally on all GECAMed machines and start it without using WEBSTART.

If you are unable to start GECAMED on you machine, please follow the instructions on how to download and start the GECAMed Client

The GECAMed Team

Depuis le 02/05/2016, certains clients GECAMed ne démarre pas correctement avec le WebStart sous Windows. Nous sommes entrain d'analyser le problème. Il semble se produire sur différentes versions de Windows, de Java et de GECAMed. Il est probable que le problème soit lié au certificat de signature du code de GECAMed nécessaire pour le WebStart. Il est pourtant encore valable jusqu'à la fin de ce mois. La nouvelle version de GECAMed 2.05.00 qui contient un nouveau certificat est planifié pour la semaine prochaine.

Comme solution temporaire, vous pouvez démarrer GECAMed en téléchargeant le client localement sur toutes les machines GECAMed sans utiliser le WebStart. Veuillez suivre, s'il vous plaît suivez les instructions fournies dans le liens ci-dessous pour télécharger et démarrer le client GECAMed.

L'équipe GECAMed

Innovative Open Source Software Solution for Medical Offices

The GECAMed “Gestion de Cabinets Médicaux” project was developed with the help of general practitioners to get luxemburgish doctors out of the “vendor lock” that holds them and their patient data prisoner. More information about the story behind GECAMed can be found [here](#).

GECAMed is Open Source software with a [GNU LGPL \(Lesser General Public License\)](#). The sources are provided via a link on our [download page](#), or by sending us your request [on our mailing list](#).

Concepts

- Open Source software solution for managing medical office data

- Developed in close collaboration with physicians
- Multi-user application with customizable profiles (Physician, Secretary, Administrator,...)
- Multi-lingual user interface, currently available in English, German and French.
- Modern, scalable application server architecture, i.e. GECAMed can be used for:
 - Small medical practices with a single physician
 - Medium medical offices with multiple physicians and secretaries
 - Large medical houses distributed over multiple sites
- Interoperability through international standards such as HL7 and IHE

Features

- Management of administrative patient data
- Medical history of patient, with attached documents
- Fully integrated access to the national DSP service (dossier de soins partagé)
- Prescription module allowing:
 - Custom prescription templates
 - Free text or assisted capture
 - Possibility to insert medication lists (CEFIP)
 - Prescription history
- Follow-up of medical treatment
- Standard letter generation based on customizable templates
- Multiple agendas with support for doctena.lu on-line booking
- Multiple waiting rooms
- Alerts and warnings for important patient data
- Billing module with a complete invoice workflow and CNS rule compliance checking and correction
- Customizable invoice templates for often used tariff combinations
- Integration of medical images (DICOM) via CD/DVD
 - Visualisation of medical images
 - Integration of significant images into medical record

Advantages

- Free and Open Source Solution
 - No Licence Fees
 - Source code available
- Multi-platform. Runs on Windows, Mac OSX and Linux
- Easy installation and configuration
- Import of patient data from existing software solutions
- Complete solution
- Independence of physician: More than one IT company can offer support for a GECAMed installation
